## Magellan Technology of Sydney Australia signs Exclusive License for Gaming Applications with International Game Technology

**Sydney, Australia - Tuesday, August 11th, 2009**

Magellan Technology Pty Ltd of Sydney (Magellan) and International Game Technology (IGT) have completed an agreement for IGT to license the use of Magellan's Phase Jitter Modulation Technology (PJM) in gaming applications worldwide. The license provides IGT exclusive use for gaming applications of Magellan's technology and IP on a worldwide basis.

Tim Frost, the Chairman and CEO of Magellan said, "Magellan is very pleased to have its technology exclusively licensed by IGT for gaming applications. As a company already active in tracking medical implants, diamonds and other valuable items, we welcome the new opportunities that IGT's license will bring to PJM technology and the gaming market worldwide."

IGT's Executive Vice President, Product Strategy, Rich Schneider said, "IGT's exclusive license to the PJM technology demonstrates our continued commitment to bring the latest technology to our customers. Magellan's PJM product furthers the RFID technology that we use with our Table iD and Chip Inventory Systems. IGT looks forward to working with our partner Magellan as we jointly bring new products and systems to the global gaming markets."

The demand for constant real time authentication of gaming tokens and the constant need to improve the oversight and management of gaming operations has led to increased demand for the superior functionality of Magellan's highly advanced PJM gaming products.

With the expansion of the gaming market in Asia and the ongoing development of new gaming applications globally, Magellan and IGT consider it timely to unite Magellan's highly functional PJM technology with the global distribution and versatile systems of IGT.

### About Magellan Technology

Magellan Technology Pty Ltd, Sydney, Australia, is a technology developer, manufacturer and licensor of advanced read and write 13.56 MHz RFID systems. Magellan designs builds and

offers a comprehensive range of advanced RFID products based on Magellan's unique Phase Jitter Modulation (PJM) technology. PJM complies with the International Standard's Organisation and the International Electrotechnical Commission's standard ISO/IEC 18000 Part 3 Mode 2. PJM products are optimized for very high speed identification and authentication applications where many hundreds of tagged articles such as poker chips, playing cards or other valuable items are stacked tightly together or need to be identified rapidly and 100% reliably in dynamic situations where tags are presented in high volume and in any orientation. Magellan develops and licenses its PJM technology world wide.
