Magellan Technology extends US presence with a new agreement with CES

Sydney, Australia – 25 September, 2009 – Magellan Technology Pty Ltd of Sydney (Magellan) and Creative Electronics and Software Inc (CES) of Illinois have completed an agreement for CES to develop, manufacture and market Magellan Technology's Radio Frequency Identification (RFID) reader products.

The global licence extends a previous agreement in place since 2007 that established CES, a dedicated US based electronics turnkey manufacturer and distribution facility as a manufacturing sub-contractor of Magellan's full line of Phase Jitter Modulation (PJM) reader portfolio.

Tim Frost, the Chairman and CEO of Magellan said, "We are very pleased to strengthen our relationship with CES as it will further consolidate our position in the North American market which has great potential for our PJM reader products.

"Customers in America will gain a significant benefit from having a dedicated local supplier of PJM advanced RFID solutions, particularly one that has the ability to adapt PJM products to their specific requirements," Mr Frost said.

CES will develop, manufacture and market all of Magellan's reader products including tunnel readers, desk top readers, document readers, the MARS family of readers, and specialist antennas. CES will primarily service but is not restricted to the US and North American markets.

"Magellan Technology's PJM RFID technology is unique and world-leading," said Robert Kowalski, Managing Director of CES. "We are very pleased to become a licensed developer and manufacturer as it will allow us to provide a better service to our customers and to extend our customer base."

About CES

Creative Electronics and Software Inc, South Elgin, Illinois USA is a full service contract manufacturing and design company. CES is ISO 9001:2000 registered and is ROHS compliant. CES services cover all types of printed circuit board assembly, cable harnesses

(UL certified) through full turn key product assembly, warehousing and delivery services. CES was founded in 1980 and has 180 employees. Further information on CES is available at www.cesinfo.com

About Magellan Technology

Magellan Technology Pty Ltd, Sydney, Australia, is a technology developer, manufacturer and licensor of advanced read and write 13.56 MHz RFID systems. Magellan designs builds and offers a comprehensive range of advanced RFID products based on Magellan's unique Phase Jitter Modulation (PJM) technology. PJM complies with the International Standard's Organisation and the International Electrotechnical Commission's standard ISO/IEC 18000 Part 3 Mode 2. PJM products are optimized for very high speed identification and authentication applications where many hundreds of tagged articles such as poker chips, playing cards or other valuable items are stacked tightly together or need to be identified rapidly and 100% reliably in dynamic situations where tags are presented in high volume and in any orientation. Magellan develops, licenses and sells its PJM technology and business solutions worldwide.
